1   16.   A method for coordinating a project for designing,

2   implementing, and using a general procurement and accounts

3   payable (GP/AP) system for a customer, comprising the steps

4   of:

5   maintaining a database of templates describing a

6   plurality of task templates including summary tasks and

7   detail tasks for analyzing and adapting a legacy

8   application to provide an adapted application

9   customized to said customer;

10   operating a plurality of web-enabled user terminals to

11   access via a server said database for coordinating

12   tasks by a plurality of enterprise teams throughout

13   project implementation phases including assessing,

14   preparing, developing, deploying and supporting phases;

15   said assessing phase accessing said database of

16   templates for defining for said customer an integrated,

17   cross-functional customer solution including technical,

18   educational, and human resource;

19   said preparing phase accessing said database of

20   templates for initializing said project and modeling a

21   plan for making a transition from said customer legacy

22   to said adapted application;

23   said developing phase for documenting in said database

24   of templates business controls, transformation

25   management, accounting, and requisition and catalog

26   application customization required for said adapted

27   application;

28   said deploying phase accessing said database of

29   templates for deploying quality, transition management,

30   and integrated project management systems and

31   procedures for said customer; and

32   said supporting phase accessing said database of

33   templates for providing communication of feedback, real

34   time application assistance, and special requests for

35   problems concerning data.

17.   The method of claim 16, further comprising the steps of

2   providing at said server a first user interface

3   template for designing said summary tasks, a second

4   user interface template for designing said detailed

5   tasks, and a third user interface template for

6   selecting or creating said summary and detailed tasks.

18.   The method of claim 17, said first and second templates
providing either directly or by way of links to other
documents, instructions, flow charts, sample questionnaires,
report models and checklists for guiding, coordinating and
documenting the work of a plurality of said enterprise teams
through steps for confirming and refining project management
standards and procedures, including an issue management
plan, project documentation, and quality assurance
standards, and creating a team building plan.

19.   The method of claim 18, said first and second templates
providing either directly or by way of links to other
documents, instructions, flow charts, sample questionnaires,
report models and checklists for guiding, coordinating and
documenting the work of a project manager of confirming and
refining said project management standards and procedures.

20.   The method of claim 18, said first and second templates
providing either directly or by way of links to other
documents, instructions, flow charts, sample questionnaires,
report models and checklists for guiding, coordinating and
documenting the work of a project office for confirming and
refining quality assurance standards.

1   21. The method of claim 18, said first and second templates

2   providing either directly or by way of links to other

3   documents, instructions, flow charts, sample questionnaires,

4   report models and checklists for guiding, coordinating and

5   documenting the work of a transition management team for

6   assigning resources to a transition management effort,

7   performing analysis on a customer HR environment, developing

8   and gaining approval for a detailed transition management

9   plan.

1   22. The method of claim 18, said first and second templates

2   providing either directly or by way of links to other

3   documents, instructions, flow charts, sample questionnaires,

4   report models and checklists for guiding, coordinating and

5   documenting the work of an architecture team and a plurality

6   of support teams for defining a bridge architecture project

7   objectives document identifying each interface into and out

8   of said requisition and catalog application, said accounting

9   application, and current application extensions.

1   23. A program storage device readable by a machine,

2   tangibly embodying a program of instructions executable by a

3   machine to perform method steps for coordinating a project

4   for designing, implementing, and using a general procurement

5   and accounts payable (GP/AP) system for a customer, said

6   method steps comprising:

7   maintaining a database of templates describing a

8   plurality of task templates including summary tasks and

9   detail tasks for analyzing and adapting a legacy

10   application to provide an adapted application

11   customized to said customer;

12   operating a plurality of web-enabled user terminals to

13   access via a server said database for coordinating

14   tasks by a plurality of enterprise teams throughout

15   project implementation phases including assessing,

16   preparing, developing, deploying and supporting phases;

17   said assessing phase accessing said database of

18   templates for defining for said customer an integrated,

19   cross-functional customer solution including technical,

20   educational, and human resource;

21   said preparing phase accessing said database of

22   templates for initializing said project and modeling a

23   plan for making a transition from said customer legacy

24   to said adapted application;

25   said developing phase for documenting in said database

26   of templates business controls, transformation

27   management, accounting, and requisition and catalog

28   application customization required for said adapted

29   application;

30   said deploying phase accessing said database of

31   templates for deploying quality, transition management,

32   and integrated project management systems and

33   procedures for said customer; and

34   said supporting phase accessing said database of

35   templates for providing communication of feedback, real

36   time application assistance, and special requests for

37   problems concerning data.

24.   The program storage device of claim 23, said method

2   steps further comprising the steps of:

3   providing at said server a first user interface

4   template for designing said summary tasks, a second

5   user interface template for designing said detailed

6   tasks, and a third user interface template for

7   selecting or creating said summary and detailed tasks.

25.   The program storage device of claim 24, said first and
